#Question: ##Import data from both statistical package and database management system

###generate and save data in statistical package :

```
library(haven)

st_data<- data.frame(st_id= numeric(0), f_name=character(0), l_name=character(0),semester=numeric(0))

st_data<- edit(st_data)

View(st_data)

write_sav(st_data, "st_data.sav")
```

##import data from SP:

```
getwd()

## [1] "C:/Users/Soluc/OneDrive/Documents/r-programming-msc/Assignments"

d_from_sp<- read_sav("C:/Users/Soluc/OneDrive/Documents/r-programming-msc/Assignments/st_data.sav")

print(d_from_sp)

## # A tibble: 3 × 4
##   st_id f_name l_name semester
##   <dbl> <chr> <chr>      <dbl>
## 1   101 sol   uwi          1
## 2   102 didi  inga         1
## 3   103 sly   shi          1

View(d_from_sp)
```

#data from DBMS

```
library(RSQLite)
library(DBI)
library(RMySQL)
```

```
##
## Attaching package: 'RMySQL'

## The following object is masked from 'package:RSQLite':
##
##      isIdCurrent

con<- dbConnect(RSQLite::SQLite(),"st_database.db")

dbWriteTable(con,"st_table", st_data, overwrite = TRUE)
```

#imprting data from DBMS:

```
d_from_db <- dbReadTable(con,"st_table")

View(d_from_db)
```

#or

```
da_from_db<- dbGetQuery(con, "SELECT * FROM st_table")

print (da_from_db)
```

```
##  st_id f_name l_name semester
## 1   101   sol   uwi         1
## 2   102  didi  inga         1
## 3   103   sly   shi         1
```
